

Life Molecular Imaging (LMI) is a global and innovative biotech company focusing on the development and commercialization of molecular imaging radiopharmaceuticals. Currently, for our approved F-18 amyloid PET tracer Neuraceq® and pipeline of PET tracers in clinical development we offer the following full-time position in the United States:

Pharma Collaborations Project Associate

The Pharma Collaborations Project Associate will be responsible for supporting collaborative projects with pharma and imaging research organizations (CROs) in neurology and cardiology that align with LMI goals and objectives.

Key Tasks and Responsibilities:

- Work with team to ensure LMI contracted projects and associated activities are completed within deadlines
- Support execution and operational management of clinical study setup for tracer use in pharma clinical trials with global supply chain including imaging site onboarding
- Organize team meetings with external customers, provide weekly or as-needed reports on project activities
- Monitor and maintain trackers for delivered tracer doses and site lists as needed in collaboration with internal operational team
- Respond timely to partner inquiries and concerns
- Participate in optimization of current processes and tracking systems

Experience:

A degree in Chemistry, Pharmacy, or related Scientific discipline; 2+ years in pharmaceutical company or academic environment with familiarity with diagnostic molecular imaging and clinical trial designs and operations; Understanding of Alzheimer's disease or related neurodegenerative disorders; Good knowledge of CFR 21 Part 212 GMP guidelines and regulatory standards; Ability to work efficiently in a team environment; Effective communication and solid project management skills; Experience in managing projects with external partners desirable; Ability to work independently and take initiative.

This position is available in the Northeast, USA. We offer a competitive salary with additional benefits.
